

# JOIN THE PATHFINDER 2 STUDY

Too often, cancer is not found until it is already very serious. Thinking about cancer can feel scary, but trying to find cancer early can help you feel more in control of your health. Early detection increases the chances of surviving cancer.

## 1 WHAT IS THE PATHFINDER 2 STUDY?

The PATHFINDER 2 Study looks at how well a new test called Galleri can find cancers early. Galleri is designed to find many types of cancer using a simple blood test. Right now, this test is still being studied and has not been approved or cleared by the Food and Drug Administration (FDA). It is still important to follow your health care provider's recommendations about cancer screening tests, such as colonoscopies or mammograms.

## 2 WHAT IS GALLERI?

The Galleri test looks at a sample of blood for any signs of possible cancer. While it can find the possibility of cancer in blood samples, it cannot tell you your genetic risk of having cancer in the future.

## 3 CAN I JOIN THE STUDY?

If you are 50 years or older, meet our rules for eligibility, and get care at one of our participating health systems, then you can be part of the PATHFINDER 2 Study. Individuals who currently have cancer or have had cancer in the last 3 years, will not be able to join this study.

## 4 WHAT WILL I NEED TO DO?

- Read and sign an informed consent form that fully explains the study.
- Provide your medical history and allow access to your medical records.
- Get 40 mL of blood drawn by a medical professional.
- Fill out survey(s) at different times during the study.
